## **DEMAND FOR BLACKMER ECCENTRIC DISC SEAL-LESS PUMPS INCREASES FOR SOAP & DETERGENTS PROCESSING APPLICATIONS**

**Grand Rapids, MI** – Blackmer, a global leader in positive displacement rotary vane, eccentric disc and centrifugal pump technologies announced that new high-value soap and detergents formulas and higher raw material costs are driving increased demand by soap and detergents manufacturers for its unique C-Series eccentric disc pump line.

Seal-less eccentric disc pumps eliminate leakage and costly product loss of high-value liquids. The pumps also use a unique oscillating pump chamber that delivers high-volume efficiency while gently handling shear-sensitive liquids such as soap additives, detergent formulas, fabric softeners, perfumes, amines, enzymes and dyes. The pump is capable of passing solids up to 3 mm in size without performance degradation.

C-Series pumps can be flushed and cleaned-in-place without disassembly and are capable of dry priming, line stripping and tank clearing for use in multi-purpose pumping applications. The pump line is available in stainless steel and ductile iron models, capable of handling 10,000 cst (46,000 SSU) liquids and working pressures of 5-9 Bar (72.5-130 psi).

For more information about Blackmer C-Series pumps, please contact Jim Becker at (616) 475-9390 or [becker@blackmer.com](mailto:becker@blackmer.com).

*Blackmer is a global leader in the design and manufacture of high quality flow technologies, including peristaltic hose, eccentric disc and rotary vane positive displacement pumps, centrifugal pumps, screw compressors, air elimination systems and sliding vane and reciprocating compressors for the transfer of liquid and gas products. Blackmer pumps and compressors are used worldwide in a variety of industries including LPG, Chemical and Industrial Processing, Energy, Food & Sanitary, Military/Marine and the Mobile Transport industries. Blackmer is part of Dover Corporation (NYSE:DOV).*
